

Characterizing emissions from WWTP

DTU Management and DTU Environment want to increase focus on sustainability modeling of wastewater systems. All projects are interdisciplinary and will draw on resources from various supervisors from both departments.

Characterizing emissions from WWTP dependent on location, seasonality and for example on the basis of meteorological data.

Project type

Topic is suitable for MSc projects

Pre-requisite

A background in environmental engineering, lifecycle assessment, modeling, and/or wastewater technology is encouraged.

Group size

1-2 students

Department of supervisors

Main supervisor: DTU Environment

Co-supervisor: DTU Management Engineering

Contact person

Associate Professor Martin Rygaard, DTU Environment (mryg@env.dtu.dk)

Associate Professor Morten Birkved, DTU Management (birk@dtu.dk)
